

# Rain Barrel to Raingarden

## What is this Project?

Master Water Stewards Mike and Betsy installed a rain barrel which will collect rainwater to use for watering indoor and outdoor plants, which then flows to a raingarden with native plants when it overflows.

## Why Install a Rain Barrel or Raingarden?

This project will reduce the amount of water that runs off this property into stormdrains. Reducing the runoff helps keep our lakes and rivers clean! Everyone plays a part!

## Project Details:

- ◆ **30 sq ft raingarden**
- ◆ **60 gallon rain barrel**
- ◆ **Captures a total of 250 gallons of water for every inch of rain!**
