

# Raingarden and Pavers

## What is this Project?

Master Water Stewards Roxanne, Erika, and Sue installed a raingarden which contains native plants and will capture rainwater from this home's roof, patio, garage, sidewalks, and driveway, naturally watering the garden. Permeable pavers are also installed on part of the driveway, which work to capture additional rainwater that would normally run off the driveway.

## Why Install a Raingarden or Pavers?

This 282 sq ft project will reduce the amount of water that runs off this property into stormdrains. Reducing the runoff helps keep our lakes and rivers clean! Everyone plays a part!

## Project Details:

- ◆ Captures water from 1076 sq ft of surface
- ◆ Captures a total of 672.5 gallons for every inch of rain!
