

Raingarden

What is this Project?

Master Water Stewards Terry and Sheila facilitated the install of this raingarden, which contains native plants that will capture rainwater and pollutants, and will also increase wildlife habitat.

Why Install a Raingarden?

This project will reduce the water that runs off a portion of the roofs in Parkway Place Homeowners Association, preventing that water from going straight into stormdrains. Reducing the runoff helps keep our lakes and rivers clean! Everyone plays a part!

Project Details:

- ◆ **250 sq ft raingarden**
- ◆ **Captures a total of 920 gallons of water for every inch of rain!**
- ◆ **Annually, this raingarden will capture 27,500 gallons of water!**
